

CHOLERA.

ABSTRACT OF DR. MARSH'S OFFICIAL REPORT TO THE BAVARIAN GOVERNMENT ON CHOLERA. NOW ADAPTED BY SALOMY, WITTEBERG, AND OTHER GERMAN STATES.

From our Munich Correspondent.

Dr. Pettenkofer examined the localities of very important cases in Bavaria visited by cholera, then the locality of each street, and at last the condition of each house, in which examination he was assisted by several other physicians and the police of the place. He found that his observations agreed entirely with those made by the London physicians in 1849 and '50, and with James's report to the medical board at Bombay. Elevation and drainage are the best preventives against contagion, as the doctor illustrates by the official list of mortality in each street and in each house, given in separate tables in his report. He also shows, from the position of Würzburg, Ratisbon, Pöhl, &c., that cholera never becomes epidemic in houses placed on a rocky foundation, and that sand underlaid with clay forms the worst basis on which buildings may be erected.—Jameson, in his report, made a similar observation in India, and observed that "cholera does not seem to be food of rocks." The London report, in like manner, shows the diminished mortality in elevated places; but it is the observation of Dr. Pettenkofer that elevation is the cause of greater health only when it facilitates drainage. Elevation, without drainage, affords no protection against cholera. This he proves by the progress of cholera in Nuremberg, Regensburg and Freysing.

On rocky or hard foundations the excrements of men and animals are carried off without being decomposed; while in loose sandy soil, especially when underlaid with clay, they are infinitely divided, and by the process of putrefaction in gaseous form again communicated to the atmosphere, to which they rise by being specifically lighter than the liquids with which they are mixed. There is a specific germ of the disease in all excrements proceeding from cholera patients, which is of course transferable to any place to which the patient may move or be carried. The disease is not in the air, nor in the water, nor communicated by contact.

The intensity of the disease in Munich, Augsburg and every other city examined by Dr. P., was in proportion to the drainage. The construction of the privies was in nearly every instance the index to the malignity of the disease and the number of its victims. A series of tables, with the very names of the victims in each town, with an exact plan of the streets, and the condition of the houses, furnish conclusive evidence of the Doctor's theory. He even shows that in one and the same house poor people were exempt from the disease, while rich and strong people became its victims whenever the faulty construction of sewers promoted the development of the disease from the infecting matter being carried thither, either by a person sick with cholera, or in the progress of an epidemic. In every case the doctor furnishes positive proof that the disease was first carried to a place hitherto not infected by a person afflicted with the malady or its premonitory symptoms. Thus he proves that the cholera was first brought to Munich by strangers from Italy, who came to the exhibition; that the house where the officers of the exhibition daily assembled was first in showing symptoms of the disease; that they carried the disease to the various streets they lived in; and that the houses thus first infected exhibited first the culminating point of the disease, and were also first exempt from it. This the doctor considers as conclusive of the fact that the disease was carried there by the said officers, because the first infection does not invariably show which are first freed from it.

At Freysing, in Bavaria, the extraordinary case occurred of the disease raging most on a mountain (the Donnersberg) and very little of it in the valley. On the mountain the drainage is toward the foot of the mountain, and the cholera was found regularly called up to prevent the earth from rolling down on an inclined plane, and the soil to consist of heavy loam and sand. Through this article the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage. The rain water from the spouts of the many large buildings, the residence of the bishop, the seminary, and the convent, all empty into the valley, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage. The rain water from the spouts of the many large buildings, the residence of the bishop, the seminary, and the convent, all empty into the valley, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

The drainage of the valley, which is usually the largest surface. The sewers consist of wooden quadrangular tubes, connected to the edge of the mountain, where they are covered by a mass of earth, and their course can be traced to the foot of the mountain. The consequence of this arrangement is, that the grounds are moist and unhealthy, and the seminary, during the last four years, had to be abandoned twice on account of cholera. On another hill, of the same town, the same imperfect drainage exists, and the consequence has been equally severe in regard to cholera. There is a ditch into which all the sewers empty; but the principal street forms a continuation of the valley, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

There are, however, two observations which the doctor considers conclusive of his theory. They consist of two cases of cholera in the district of Munich, one situated in different towns, and to which cholera was carried by prisoners afflicted with cholera, and the other, a private case, in which cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

The first of them is the Convent Elbach, transformed into a prison for about a thousand delinquents. The cells of the prisoners are provided with night stools, which are emptied into privies in the street, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage. The second case is a private case, in which cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

the disease; the officers of the prison only by a slight cholera. In the regular course of infection the disease must have travelled from the male department through the rooms occupied by the officers and soldiers, to the female portion of the prison; but in this case it jumped from one place to the other, omitting the intermediate space. The doctor then made inquiry as to the female prisoner, Anna Maria Meyer, who was first attacked by the disease, and the result was brought to him by the physician in charge of the prison, who was Anna Maria Meyer's turn, and it was she who of all the female prisoners, was first sent to the hospital. Grasse had been afflicted with cholera before he arrived in prison, and his clothes were soiled. The doctor says: I was led to this examination by the position of the mortality of cholera, &c., London, 1862, where it is said that it was without danger to wash the clothes of cholera patients. The same was observed in India, where they washed the clothes of cholera patients in the Ganges, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

It is customary in the prison to take off and wash the soiled clothes of every new comer, label it and return it to the prisoner on his leaving the institution. The female prisoners are detailed for that service in couples, which relieve each other from time to time. Names and dates are regularly inscribed in a book, and on examining that book it was found that when Grasse's clothes were washed, which was on the 21st of August, the day of his arrival in prison, (the 20th of August) being a Sunday, it was Anna Maria Meyer's turn, and it was she who of all the female prisoners, was first sent to the hospital. Grasse had been afflicted with cholera before he arrived in prison, and his clothes were soiled. The doctor says: I was led to this examination by the position of the mortality of cholera, &c., London, 1862, where it is said that it was without danger to wash the clothes of cholera patients. The same was observed in India, where they washed the clothes of cholera patients in the Ganges, and the cholera was carried to the valley, and the impurities of human habitations have been filtered for ages without regular drainage.

FINANCIAL AND COMMERCIAL.

MONDAY, AUGUST 20—P. M.

Quotations for stocks taken toward this morning. The decline was general, but there was no great pressure on the market. There was no particular movement in any particular stock. At the first board Erie bonds 1871 fell 1/2 percent; Illinois Central bonds, 1/2; Michigan Transit, 1/2; Canton Co., 1/2; Cumberland, 1/2; N. Y. Central Railroad, 1/2; Illinois Central Railroad, 1/2; Erie Railroad, 1/2; Harlem, 1/2; Reading Railroad, 1/2; Cleveland and Pittsburgh, 1/2. The market was, on the whole, dull and stupid. Monday, at this season, is usually a heavy day at the board in consequence of the absence of many operators.

After the adjournment of the board the following sales of bonds and stocks were made at auction by Albert H. Nicolson:

10,000 Crawford Co., Pa. Bonds, Int. added 7 1/2
10,000 Erie Bonds, Int. added 7 1/2
10,000 Illinois Central Bonds, Int. added 7 1/2
10,000 Michigan Transit Bonds, Int. added 7 1/2
10,000 Canton Co. Bonds, Int. added 7 1/2
10,000 Cumberland Bonds, Int. added 7 1/2
10,000 N. Y. Central Railroad Bonds, Int. added 7 1/2
10,000 Illinois Central Railroad Bonds, Int. added 7 1/2
10,000 Erie Railroad Bonds, Int. added 7 1/2
10,000 Harlem Bonds, Int. added 7 1/2
10,000 Reading Railroad Bonds, Int. added 7 1/2
10,000 Cleveland and Pittsburgh Bonds, Int. added 7 1/2

At the second board today the market for some stocks was slightly better, while in others the tendency continued downward. New York Central advanced 1/2 percent; Erie, 1/2; Reading, 1/2; Cumberland, 1/2; Cleveland and Toledo declined 1/2 percent. All Western railroad stocks are dull and neglected. The effect of great receipts during the full months on the stocks of these railroad companies has already been anticipated, and we should not be surprised to see an unfavorable reaction in all of them. Some of them have been bolstered up beyond all reason, and great disappointment will be experienced when holders commence to figure up about the next dividend.

It is with the deepest sorrow that we record the death of Mr. Charles A. O'Brien, of the firm of W. & J. O'Brien. For some weeks he has been lingering under an attack of hemorrhage of the lungs. The hope that his life would be prolonged until the return of that portion of the family now in Europe was entertained until within a day or two, but in vain. He rapidly declined, and died this morning. Young, active and enterprising, it was hard to be thus cut down at the commencement of a career which opened so bright and bid fair to be a highly honorable and successful one. The many who for years have been in the habit of transacting business daily with the firm of which he was a member will not soon forget his prompt and active attention, his mild and conciliating manners, and the sincerity and candor which marked his intercourse with all. We deeply sympathize with his family in their bereavement. Although prepared for such an event, it has not by familiarity lost any of its poignancy. To his brothers it must seem like withdrawing the first link from a chain which until now has been one perfect whole.

The transactions at the Assistant Treasurer's office today were as follows:

Public Treasury account, \$44,382.20
Received, do, 244,000.00
Paid on Treasury account, \$1,214,000.00
Paid on Treasury account, \$1,214,000.00
Paid on Treasury account, \$1,214,000.00
Paid on Treasury account, \$1,214,000.00

The warrants entered at the Treasury Department, Washington, on the 17th inst., were as follows:

For the Treasury Department, \$4,570.41
For the redemption of stock, \$4,570.41
For the redemption of stock, \$4,570.41
For the redemption of stock, \$4,570.41
For the redemption of stock, \$4,570.41
For the redemption of stock, \$4,570.41

The New Albany and Salem Railroad Company earned in July \$50,091.24, against \$31,234.71 for the same month last year, showing an increase of \$18,856.53 for the month this year.

We annex the gross income for July of the three principal railroads, the stocks of which are operated in daily to some extent at the Board of Brokers:

NEW YORK CENTRAL, JULY, 1855.
Gross income, \$34,500,000
Net income, \$2,500,000
Total, \$37,000,000

We have no official returns showing the expenses for the month of the Central or Erie roads. The current expenses, therefore, of these companies are put down at fifty per cent. According to this, the net income of the Central in July was \$12,049 less than the Reading, and the Erie \$7,657 less. When we consider that the cost of the Erie and Central is each double that of the Reading, the comparative productiveness of each can be easily figured out. The Reading Company earned a larger sum in July on ninety-three miles of road, than the Central did on about three hundred and fifty miles of road.

The Erie and Central Railroad Company, in its report to the Board of Brokers, states that the gross income for July was \$34,500,000, and the net income was \$2,500,000.

The Erie and Central Railroad Company, in its report to the Board of Brokers, states that the gross income for July was \$34,500,000, and the net income was \$2,500,000.

The Erie and Central Railroad Company, in its report to the Board of Brokers, states that the gross income for July was \$34,500,000, and the net income was \$2,500,000.

The Erie and Central Railroad Company, in its report to the Board of Brokers, states that the gross income for July was \$34,500,000, and the net income was \$2,500,000.
